SAND'S LEVELS TELL THE TRUTH

SAND'S *WOOD AND ALUMINUM* LEVELS

STANDARD OF QUALITY

We are the originators of the Sand's type of Mason and Carpenter's wood and aluminum levels. We invented the first combination plumb and level in 1895. Our growth to the largest plant of its kind in the world has been due to the fact that the trade recognized the accuracy and progressiveness of the company and its continued improvements of the genuine Sand's products.

PERMANENT FACTORY BUILT-IN ACCURACY

This feature makes Sand's Levels the recognized standard for layman or mechanic. The high standard of precision tests and inspection employed in the construction of Sand's Levels makes them the undisputed leaders in their class. Permanent factory built-in accuracy is an exclusive Sand's feature.

SAND'S CALIFORNIA WHITE SUGAR PINE PLUMBS AND LEVELS

Made of carefully selected stock, straight grain, free from sap. In addition to being thoroughly air-dried at the mill, each piece is dried from 10 to 12 months in our plant before being made into finished stock to insure against any possibility of warpage, thereby assuring absolute accuracy. All pine levels are finished with three coats of weather proof paint; all six glass levels will plumb any end, or level any edge up.

Sand's Aluminum Levels are the standard of accuracy, and the easiest to read in dark places. They will plumb any end or level any edge up. This allows overhead use to plumb or level ceilings, girders, shafting, etc. Can be used and read in any position, high or low, up or down, at arm's length.
